

Homepage Design Competition — Creative Brief

For freelance designers · nexbrix.com.au

About NexBrix

NexBrix is hospitality operations software for independent cafés and restaurants, takeaway shops, food trucks and small hospitality groups (roughly 1–10 locations). It connects the everyday operational chain — stock, purchasing, deliveries, invoices, sales and staff — so owners can see waste, catch mistakes and understand where their money is going. Launch market: Australia, Western Australia first.

The Brief

We're running a design competition to find a fresh homepage concept for nexbrix.com.au, built around the exact copy in Section 3 below.

Layout, structure, typography, imagery and overall visual style are entirely up to you. We're only locking the logo and colour palette — everything else is your creative call. We want to see your own interpretation of this brand and this content, not a template filled in.

For reference only (not to copy): we're also sharing three example concepts already produced for this brief — one designed in-house, and two generated using AI website builders. These show you the level of content and functionality we're expecting on the page. They are not the design standard to imitate or beat — we're deliberately looking for different creative directions.

Brand Guidelines

Logo

Supplied separately as an image file. Keep clear space around it; never stretch, skew, recolour or add effects to it; don't place it over busy backgrounds.

Colour palette

Colour	Hex	Role	Swatch
Jet Black	#000000	Primary	
White	#FFFFFF	Primary	
Tartan Green	#0A2924	Secondary / accent	
Super Mint	#BDEBCF	Secondary / accent — used sparingly	

That's the full extent of the brand rules. Beyond the logo and these four colours, typography, layout, iconography, motion and imagery are entirely your choice.

Homepage Copy

Use the copy below as-is. Reflow, restyle and lay it out however suits your design — just don't rewrite the messaging.

Please add a visual to each section. You can design your own graphic or illustration based on what that section is saying, or — if that's easier — just drop in a generic mobile app or iPad/tablet app screenshot as a placeholder to show where a product visual would sit. It doesn't need to be an accurate NexBrix screen; it's there to show us how you'd frame a visual next to the copy.

Navigation (desktop header)

Product · Solutions · Resources · Pricing · About · Login · Book a Demo

“Book a Demo” is the primary call-to-action and should stay visible at all times (e.g. sticky header).

1 · Hero

BUILT FOR HOSPITALITY

Know what you have. Know what you use. Know where your money goes.

NexBrix connects your stock, purchasing, deliveries, sales and staff operations — so you can spot waste, make better decisions and protect your margins.

Stock · Purchasing · Deliveries · Sales · Staff

Buttons: [Book a Demo] [See How It Works]

2 · Recognise the Problem

You can't control what you can't see.

Stock gets counted. Orders are sent. Deliveries arrive. Invoices come later. Sales sit in your POS. Staff work their shifts — and it all lives in separate spreadsheets, emails and systems.

NexBrix brings it together, so you can see the bigger picture without adding more complexity.

3 · The Connected Chain, Proven

From today's stock count to the numbers that matter.

- COUNT — See what you actually have.
- ORDER — See what needs replenishing and create the purchase order.
- RECEIVE — Record what actually arrived when the supplier delivers it.
- MATCH — Automatically compare invoices with deliveries and flag anything that doesn't match.
- CONSUME — See what stock has actually been used.
- COMPARE — Compare actual consumption with what your sales and recipes say should have been used.
- UNDERSTAND — See the differences and get a clearer picture of where your money is going.

You sold 50 chicken dishes. Your stock says you used 12kg, not 10kg.

50 dishes sold · 200g per dish · 10kg expected · 12kg actually used · +2kg / \$24 variance

Waste? Over-portioning? Staff meals? Recipe issue? Recording error? Something else? NexBrix connects sales, recipes and stock data so the difference — and what it costs you — is visible.

Note: *this exact example (50 dishes / 200g / 10kg / 12kg / \$24) is the canonical proof point used site-wide. Please use these exact figures rather than substituting a different example.*

4 · Purchasing & Invoice Matching

Know what you ordered. Know what arrived. Know what you're paying for.

Ordered 20 → Delivered 18 → Invoiced 20 → 2 to check

Order ✓ → Delivery ✓ → Invoice ✓ → Approved for payment

No more chasing someone to ask what arrived last Tuesday.

5 · Staff, Simplified

Your staff shouldn't need a different app for every job.

Check a roster. Submit availability. Clock in and out. Enter a timesheet. Count stock — all in one simple place.

Arrive → Tap → Work → Tap → Done

6 • Final CTA

Built by people who've run hospitality businesses themselves — for one venue or several.

See what NexBrix could look like in your business. Show us how you currently manage stock, purchasing and staff — we'll show you how NexBrix can bring the workflow together.

What to Submit

- A Figma link, or a rough sketch/wireframe of your homepage concept — high-fidelity design is not required to enter.
- Or, share an example of a website you've designed before that shows what you could do with this kind of copy and structure — you don't need to design anything new just to enter the competition.
- If you do want to go further, a working prototype (Figma, HTML, or any tool) is welcome but not expected.

Competition Details

Deadline: 28 August 2026

Budget / Prize: \$100

Submit to / questions: [ADD LINK OR CONTACT]

Reference Files & Examples

These are provided alongside this brief — for content and functionality reference only, not a style to copy (see “The Brief” above).
